#WE AAA RE

ADAPTATION OF AFRICAN AGRICULTURE

the potential

65% OF THE WORLD’S UNEXPLOITED ARABLE LAND IS IN AFRICA

Agricultural development in Africa carries tremendous potential: the continent is home to the largest portion of farmable land on the planet, and the prospects for increasing harvest yields on cultivated lands are very promising. Africa’s reservoir of farmers, coupled with developments in innovative agricultural techniques, will allow to contribute to overcoming the challenges of climate change and food security.
